## ABOUT ME

Hi! I'm **Proud**, a recent Software and Knowledge Engineering graduate from Kasetsart University with hands-on experience across the full product lifecycle. I enjoy connecting product design thinking, technical problem-solving, and real customer/business empathy to build meaningful solutions. Through my PM/PO internship at ByteArk, hands-on university projects, and freelance work, I have gained experience in UX research, requirements definition, sprint backlog management, scope negotiation, frontend development, API design, and communication with both teams and customers. With my product mindset and technical foundation, I'm confident that I can grow with the team and create meaningful impact.

## SKILLS

**Product:** User Story & RFC Writing, Requirements Definition, Backlog Prioritization, Sprint Planning, Release Management, Stakeholder Communication, Roadmap Planning

**Research & Discovery:** UX Research, User Interviews, Survey Design, Pain Point Analysis, Competitor Analysis, Persona Development, Journey Mapping

**Design & Prototyping:** Wireframing to Low-to-High-fidelity Mockups, Mobile-First UI, Figma, PowerPoint

**Agile & Process:** Sprint Planning & Retrospectives, Backlog Grooming, Risk Management, Cross-team Coordination

**Technical:** Next.js / React, React Native, TypeScript, Tailwind CSS, Python, SQL, Prisma, Docker, GitHub Actions

**Tools and AI:** Jira, Linear, ClickUp, Notion, Postman, Miro, Google Sheets, Claude Cowork, Claude Code, Codex, Gemini, Kling

## WORK EXPERIENCE

### ByteArk Co., Ltd. | PM/PO Intern

May 2024 – Nov 2024

- **Proactive discovery:** Ran user interviews, pain-point analysis, and competitor benchmarking before a single requirement was written — brought insights back sharp enough to change what the team built.
- **End-to-end ownership:** Wrote detailed user stories, acceptance criteria, and RFCs; collaborated with designers to translate requirements into intuitive UI flows; verified every release against those criteria before it shipped.
- **Bridge between worlds:** Monitored sprint progress daily, surfacing misalignments between design intent and engineering execution early — unblocking the team before blockers escalated.
- **Quality obsession:** Conducted manual, regression, and exploratory testing; filed structured bug reports and owned the release-readiness checklist.

### Hokori Design Studio / Self-employed | Freelancer & Founder

Oct 2021 – Present

- **100+ deals closed:** Ran a small design and development studio end-to-end — sourced and managed client relationships, mostly with business owners, across 100+ projects.
- **Requirements & commercial ownership:** Sat directly with clients to analyze requirements, scoped deliverables, quoted and costed each project, and closed the deal, translating client needs into concrete specs before any work began.
- **Operations & delegation:** Managed bookkeeping and financial close-out for every deal, and split work across a small team — balancing quality, timeline, and budget on each engagement.

### SKE19 & CPSK Club, Kasetsart University | Vice-President & Financial Manager

Jan 2022 – Dec 2024

- **Led teams of 30+:** Organized BarCamp Bangkhen, JobFair CPSK KU, SOS Camp, and Byenior; managed all financial operations including budgeting, procurement, and reporting.

### Google Developer Student Club (GDSC), KU | Core Team Member

Aug 2022 – Apr 2024

- **Organized tech events and workshops:** developed hands-on teaching tools in sessions; coordinated external speakers.

## EDUCATION

### Kasetsart University

Graduated May 2026

B.Eng. in Software and Knowledge Engineering

## PROJECTS

---

### KU Eater

2025

*Product Owner · UX/UI Designer · Frontend Developer*

*A cafeteria discovery app that helps KU students choose better meals from menus, reviews, and personalized recommendations.*

- **Customer-Driven Discovery:** Led product discovery from real student pain points through observation, interviews, persona analysis, and competitor research to understand why KU students struggled to choose satisfying meals.
- **Product Vision & MVP Strategy:** Defined a mobile-first food discovery platform focused on real stall menus, food images, reviews, likes/saves, and personalized recommendations to support faster and more confident meal decisions.
- **User Insight & Experience Design:** Translated picky-eater behavior and international student needs into features such as dietary preferences, ingredient details, spice-level preferences, and personalized menu warnings.
- **Recommendation Logic & Data Structure:** Structured 1,500+ menu, ingredient, and stall records, then designed scoring logic based on user preferences and in-app actions to improve recommendation relevance.
- **End-to-End Ownership:** Owned the flow from research and requirement definition to UX/UI design, and frontend development with React Native and Expo, while aligning the team around product goals and delivery milestones.

### Courtly

2026

*Frontend Developer · Product Owner · Project Manager · System Architect*

*Badminton court booking and management system for players and managers; booking, payments, scheduling into one platform.*

- **Delivery Ownership:** Led sprint planning, task breakdown, and priority decisions for team, balancing each member's skills, workload, and constraints to keep delivery on track.
- **Scope & Capacity Control:** Monitored team capacity closely, re-prioritized backlog items or adjusted sprint scope under pressure without losing the core feature value.
- **Operational Product Execution:** Designed dual Player/Manager workflows covering real-time court availability, instant booking, coin wallet payment, auto-refund, top-up approval, schedule control, and booking records.
- **Technical Leadership:** Built the frontend with Next.js, TypeScript, and Tailwind CSS while aligning UX flows, defined API structure and system feasibility with the team.

### Referite

2023

*Project Manager · Product Owner · UX/UI Designer*

*Referee management and sports scoring system; a simulated Paris 2024 Olympics software suite*

- **Agile Product Execution:** Served as Product Owner in a formal Agile setup, managing sprint planning, backlog grooming, retrospectives, planned the overall project using a PERT chart and task-tracking workflows.
- **Cross-team Coordination:** Coordinated integration with other teams in simulated Paris 2024 Olympics software suite, aligning requirements and dependencies across multiple sub-teams.
- **UX/UI Design:** Designed high-fidelity mockups and end-to-end user flows, translating product requirements into clear, development-ready specifications.

### SleepSense

2026

*ML & Backend Developer · Product Owner · System Architect*

*IoT-based sleep environment monitoring system; uses real-time sensor data and an ML pipeline to predict sleep quality scores*

- **0-to-1 Product Ownership:** Initiated the product from scratch by identifying sleep environment monitoring as an IoT opportunity aligned with the longevity trend; defined the problem, scope, roadmap, and feasible MVP.
- **End-to-End IoT Execution:** Researched environmental factors affecting sleep, selected and calibrated sensors, connected hardware, and implemented MQTT with Node-RED flows to collect real-time sleep environment data.
- **Data & ML Product Thinking:** Collected sensor data with user sleep scores, prepared the dataset for analytics, and built a baseline model to predict real-time sleep quality scores from environmental conditions.

### EcoWear.

2024

*UX/UI Designer · Product Researcher*

*Sustainable fashion shopping app designed to make eco-conscious clothing feel stylish, trustworthy, and easy to choose.*

- **End-to-End UX Research:** Conducted interviews, user research, personas, and customer journey mapping to understand decision friction in sustainable fashion shopping.
- **Product Differentiation:** Designed unique product detail sections showing each item's sustainability story, material background, and styling inspiration through short-form video/social proof.
- **Branding & UI Design:** Created wireframes, low-fidelity mockups, high-fidelity screens, and an interactive prototype with a cohesive luxury, minimal, earthy brand direction.
